

LF EURO 6 SERIES CABS

EXTERIOR

The urban cab

The external looks of the LF Euro 6 cab clearly shows its family ties with the CF and XF Euro 6 cabs. The large grille with DAF logo on a silver bar, the new head light panel and the galvanised steel bumper, beautiful and functional at the same time.

A closer look at the cab front reveals still another quality: the perfect fit and finish, resulting from a high form stability of the various panels, exactly defined clearances between panels and the absence of infill panels for the different weight classes.

In the inner-city or on regional roads: the LF Euro 6 distribution cab always makes a good impression. Tasteful styling, sound constructions and good workmanship, the LF Euro 6 cab breathes quality in all aspects.

Manoeuvrable, robust and nice to look at

The LF Euro 6 cab was designed for distribution applications. Easy access, excellent visibility, compact and highly manoeuvrable.

In dense and chaotic inner-city traffic the vehicle should not be susceptible to minor but costly damages. However, as more than in any other application urban distribution vehicles are exposed to the public eye, the cab should give a pleasant effect.

Cab styling

To a large extent the appearance of the LF Euro 6 cab is set by the large windscreen area and the deep, wide grille. A silver bar with DAF logo decorates the top section of the grille. Wide cooling openings with honeycomb grids in both the upper and the lower grille create the impression of a one-piece cab front from roof to bumper. Plenty of space for company logo and name is available in a prominent position below the windscreen. The lower cab area is dominated by a new head light panel and a neat front bumper. Three different depths for the head light panel are used depending on the wheel size.

INTERIOR

Interior styling and trim

New colours, new dashboard, new seats. A lot of changes to give the cab interior a fresh and completely new look. New dashboard, new gear lever console, new functionalities support to enhance the ergonomics and to make driving the new LF even more relaxed.

Driving

The dashboard design is completely new and apart from its modern looks features improved control comfort and ergonomics. The dashboard features new switches, a multifunctional main lighting switch and an instrument panel in which the 5 inch full colour TFT display with Driver Performance Assistant immediately attracts attention. Switches with similar functions have been grouped together for easy reference. The dashboard wing contains a double-DIN slot, and in case of a manual gearbox a gear shift lever positioned on a dashboard mounted console.

Seats

The new generation of LF seats was designed to offer excellent seating comfort. The materials and foams were carefully selected in order to maintain an optimum microclimate. The tasteful breathing upholstery perfectly matches the interior colour of the cab.

Dual mate seat

A dual mate seat with upholstery as for the driver and co-driver seats is optional for all cab variants. Both seats have head restraints. The inner seat has a foldable armrest.

In case of a Day Cab both occupants will have an inertia real seat belt, attached to the cab structure. The inner seat will have a lap belt if the dual mate seat is installed in a Sleeper Cab or an extended Day Cab.
